## Challenge – Interactive Rating Component

This is a nice, small challenge to practice handling user interactions and updating the DOM.

Perfect for anyone who has learned the basics of JavaScript!

Your challenge is to build out this mobile responsive, interactive rating component and get it looking as close to the design as possible.

Download the assets.zip file and go through the assets/README.md file. This will provide further details about the project and help you get set up.

To see how the desktop and mobile designs should look like go through the images in the assets/design/ folder.

Your users should be able to:

1. Select and submit a number rating.
2. See the "Thank you" card state after submitting a rating.
3. See hover and focus states for all interactive elements on the page.

The figma.zip file has detailed designs. These will provide you with the details that you need to build a pixel perfect design.

Go through the figma/README.md file. This will give you guidance on how to install and get started with figma.
